Access control with
smartphones

Fully integrated
into your access
solution

dormakaba 

mobile access

Stay secure on the move

With mobile access you are always on the safe side: A very simple, flexible way of granting access using your smartphone, which also increases security.

Functions of mobile access

- Use smartphones for access
- Can be used with all current dormakaba online and stand-alone components
- Manage rights centrally with the dormakaba solution
- Transfer rights over secure processes in the mobile network
- Transfer data in encrypted format
- Transmit door status and access events to the dormakaba solution

Your benefits

- High acceptance thanks to ease and convenience
- Optimises authorisation processes, saving time and resources
- Less installation effort on doors as no online connection required
- Less admin effort as no local programming of access rights necessary
- No effort and no complications with lost or forgotten IDs
- Enhanced security for isolated doors
- Unlike plastic media, loss of a smartphone is usually discovered right away, with the option to deactivate
- The access medium is with you practically all the time and does not get forgotten

mobile access

Stay secure on the move

New technologies open up new possibilities – for you: dormakaba's access solutions now allow you to use smartphones for your access needs. Guaranteeing you ease, flexibility and security.

It's as simple as this

Imagine a service engineer who needs fast access to a specific area, whose access components are not linked into the network. The service engineer simply uses mobile access to request the relevant access right and receives immediate permission.

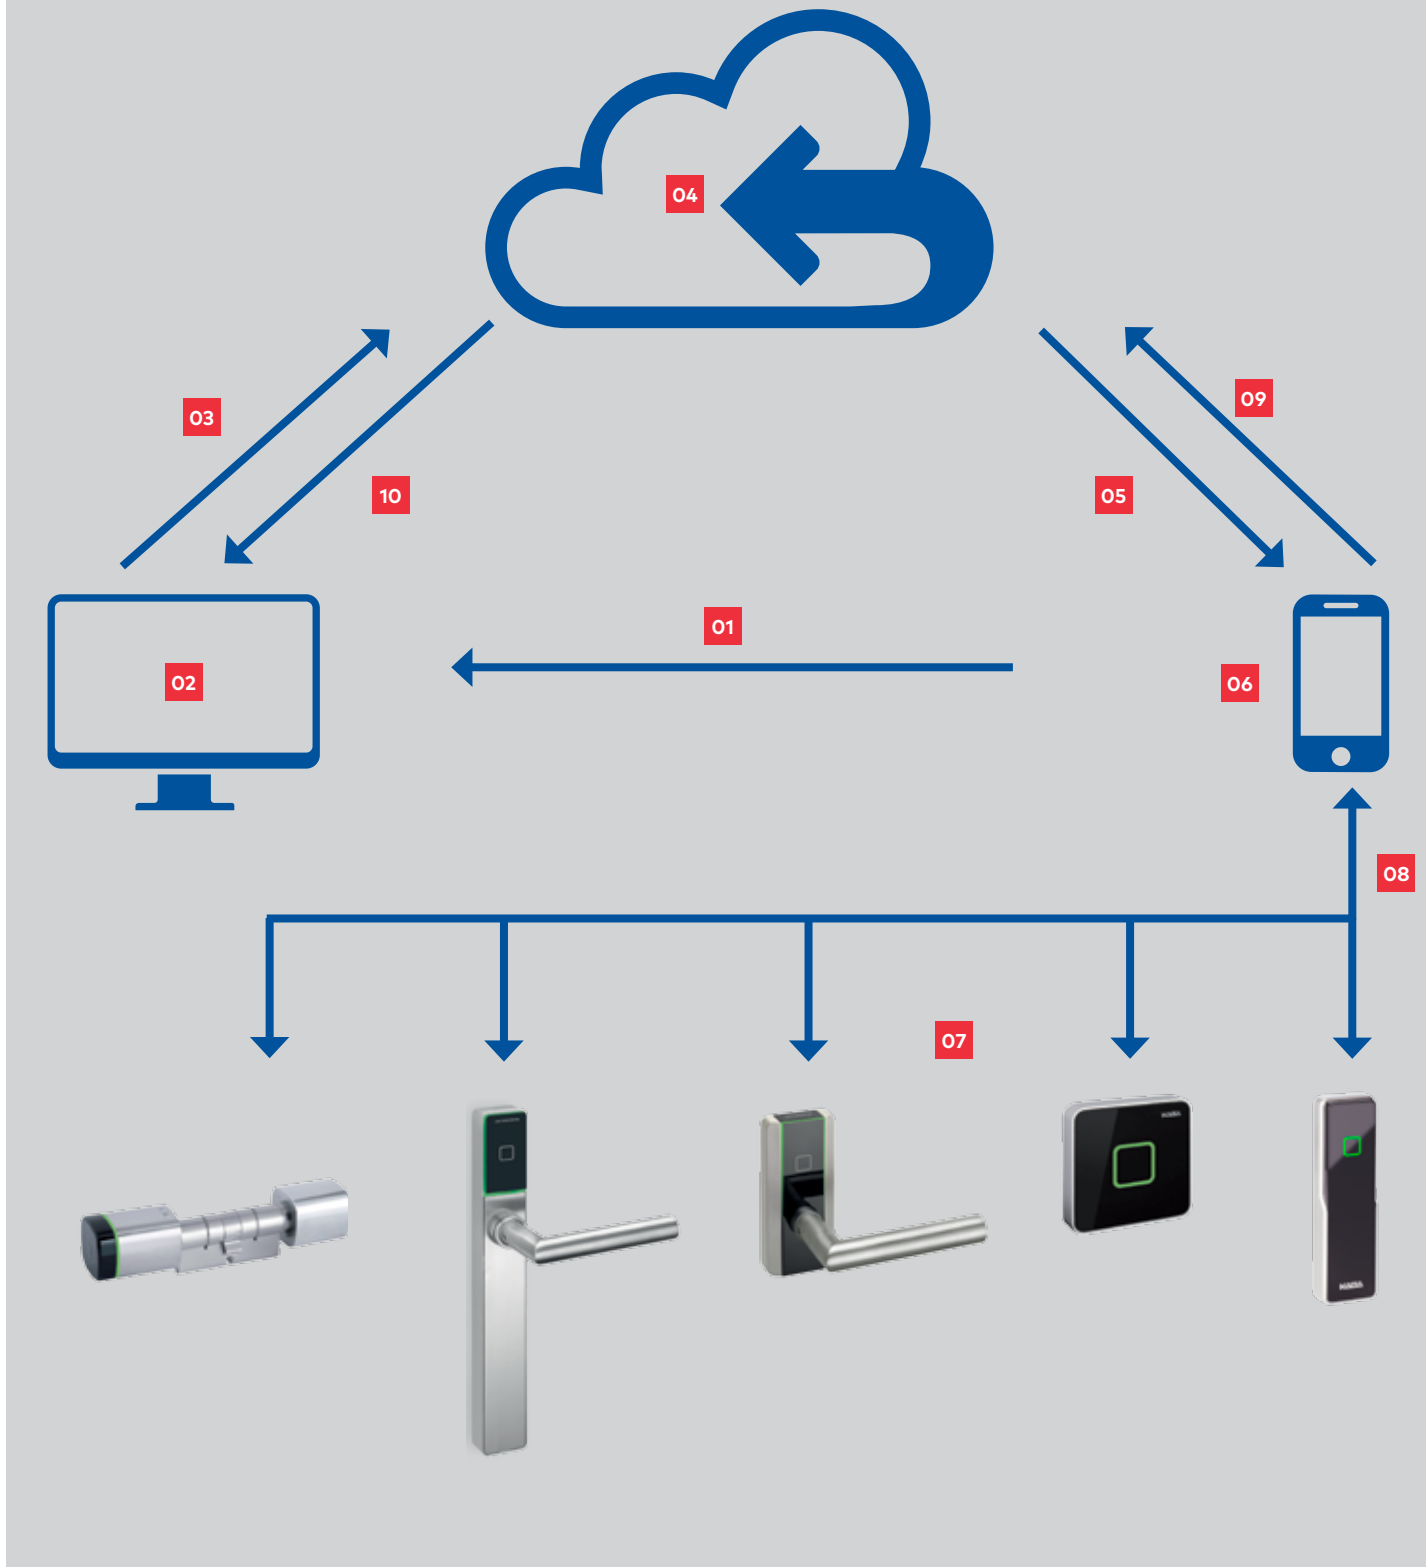

It's as flexible as this

What's special about it: Awarding rights is performed over your mobile network and can therefore be conducted flexibly and quickly as the situation demands. Smartphones simply become your key to access – and you save legwork, time and capacity.

It's as secure as this

And of course only those authorised are granted admission by mobile access: Data transmission is exclusively conducted over secure processes, all of which are specially protected. In addition, door status and events can be transmitted back to central operations in the same way. Everything is therefore transparent and you are always in the picture.

01
Request access rights

02
Access management software, e.g. Kaba exos 9300

03
Award rights

04
LEGIC Connect permit secure data transmission

05
Transmit access rights

06
Smartphone as access key (via Bluetooth or NFC)

07
Access over electronic locking systems

08
Read back door status and events

09
Read back door status and events

10
Feedback to system

Access control with smartphones fully integrated into your access solution. Would you like to find out more about our easy flexible and secure solution? Look us up:
