Mobile Access
Integrator Program
Mobile Access Solutions

Overview

Our Mobile Access Integrator Program is a service product that provides a fast path to the benefits of mobile access. The program, based on many successful mobile access deployments, is a structured program designed to mitigates the risks associated with new technology insertion projects.

The program is ideal for third-party integrators that develop mobile apps for hotels.

Benefits

• Based on defined milestones and deliverables
• Efficient path to a successful integration of the software development kit
• Helps reduce cost and time to market of your mobile app

Installation and Customer Services

1. Configuration of Bluetooth Low Energy (BLE) Lab

dormakaba will install, configure and test the mobile access development environment and perform the following tasks:

- Configure the key delivery platform
- Install Saflok 6000 on the development server
- Install Saflok 6000 on client PCs
- Program demo locks
- Install and configure development tools
- Test mobile credential delivery and mobile access

2. Software Development Kit (SDK) Workshop

dormakaba offers workshop sessions to help developers to seamlessly integrate the SDK in their app. During this workshop, developers learn the basic functions of the BLE SDK.

3. Mobile App Design Review

As a dormakaba partner, the integrator will submit documentation outlining the architectural overview and SDK integration points to dormakaba for review. Identified inconsistencies contrary to best practices will be reported to the customer.

4. Mobile App Validation

dormakaba engineers test the application to validate the integrity of the SDK's integration points.

5. Technical Support

dormakaba will provide technical support throughout the duration of the project.

Partner with dormakaba and contribute to make mobile access a reality, simply and securely.
