

A close-up photograph of a modern door handle set. It consists of a large, circular, brushed metal escutcheon mounted on a door, with a matching rectangular pull plate extending from its side. Both pieces feature a subtle horizontal grain texture. The handle itself is a sleek, curved design. In the bottom left corner of the image, there is a semi-transparent white box containing the word "OGRO" in a bold, black, sans-serif font, with a short horizontal line underneath it.

## Our commitment to a sustainable future

We are committed to sustainable development as one of our business maxims. DORMA's aim is to ensure energy-saving and resource-conserving production,

a high recycling ratio and the longevity of our quality products. Environmental Product Declarations (EPD), based on a holistic life cycle assessment,

are used for the calculation of the sustainability of buildings. EPD certificates are available on [www.dorma.com](http://www.dorma.com)

# OGRO – DOOR FURNITURE AT ITS MOST ELEGANT

The OGRO door furniture range offers aesthetically and technically sophisticated solutions capable of meeting the high demands of the project business. With the OGRO range, identical lever handles can be combined with precisely matched roses, escutcheons and backplates for use on timber, narrow stile and toughened glass doors. The system comprises three components that can be flexibly combined with one another: Lever handles, roses/backplates and spindles.

The entire OGRO range is able to satisfy virtually any design related requirement. From the modern to the classic. The wide choice of models offers an impressive indication of the high standard of quality available with the DORMA brand.

# 10

**YEARS WARRANTY ON ALL  
PRODUCTS FEATURING  
OGRO TECHNOLOGY\***

## Benefits at a glance

### For the architect

- A tiny shadow joint ensures visual integrity
- The high quality Satino surface finish satisfies very high demands with respect to the appearance of the door furniture.
- The consistently maintained standard height of just 9 mm for all roses and backplates ensures that the same design elegance is maintained on all the doors of a project.
- The OGRO by Architects customising service also enables you to implement individual design ideas for your project.

### For the trade

- Modular system reduces storage space requirement.
- Square section spindles provided separately: With different door thickness, you just replace the spindle rather than having to order a completely new furniture set.
- Identical fixing screw and spindle length increments simplify materials management.
- Having been assigned category of use grade 4 per EN 1906, OGRO door furniture can also be reliably installed in buildings subject to heavy pedestrian traffic frequencies.

### For the installer

- The horizontal return springing ensures that the lever handles will not sag or drop, even after many years of use.
- The springing mechanisms are non-handed and therefore interchangeable, avoiding the problem of installation mistakes.
- Click & Go technology facilitates fast, simple fitting, saving time and money.
- Roses, escutcheons and backplates can be prefitted to the door in the factory or workshop.
- Space-saving door transportation. The knobs and lever handles are simply clicked into the socket just before the building inspection takes place.
- The long support lugs on the mounting elements mean that larger door thickness increments can be accommodated with the same screw fixing length.

# OGRO – THE VISUAL ELEGANCE

## OGRO with tiny shadow joint

The integrated OGRO design appearance is strengthened by the minimal shadow joint between lever handle and escutcheon.

## Satino finish

The more sophisticated the design of a detail, the greater its beneficial effect on the whole. The Satino finish applied to the OGRO range of door furniture epitomises this rule.

The combination of a high grade material, true craftsmanship

## Aluminium

Coloured and anodized in-house, do the OGRO aluminium fittings benefit of a tight and even oxide layer protecting effectively against weathering, wear and tear.

Available in

- F1 anodised silver
- F2 champagne
- F3 brass
- F4 bronze
- F5 dark bronze
- alike stainless steel

and such a fine satinised surface creates a unique elegance. The result: the complete furniture set blends harmoniously into the design of the door.

## Stainless steel

OGRO stainless steel door furniture is characterised by a refined satin finish. This gives the associated fittings a high quality appearance. They are also highly wear and impact resistant and satisfy exacting demands.

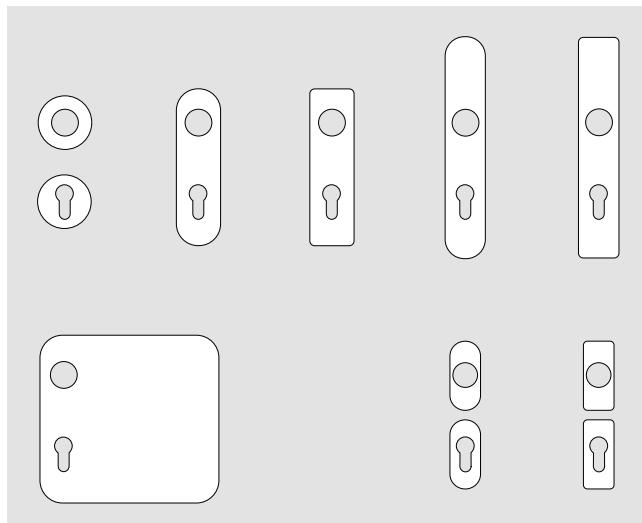

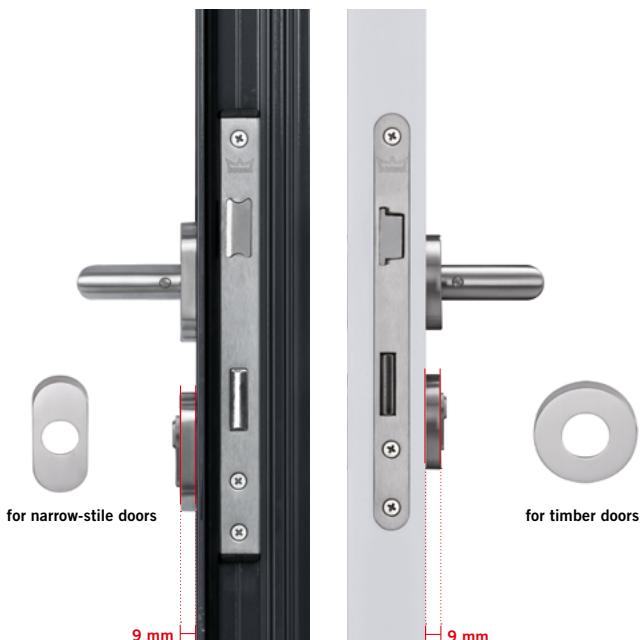

Available in

- satin
- mirror finish

## Identical heights of all roses/backplates

The difference is that there is no longer any difference. OGRO scores with identical heights for roses and back-plates. Only once all the shapes in a room are in harmony will the ambience enthrall. And OGRO makes a major contribution to such an effect.

All the covers of the roses and backplates, whether for timber or narrow-stile doors, have a uniform height of just 9 mm. In keeping with DORMA's commitment to provide contemporary hardware for high quality building designs.

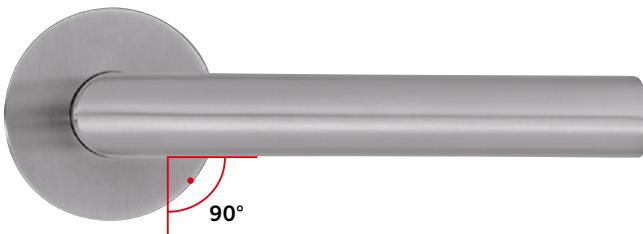

The 9 mm height is common to all OGRO roses and backplates for timber and narrow-stile doors and also for window handles.

# OGRO – THE TECHNOLOGY

## Return springs for timber and narrow-stile doors

The OGRO technology withstands the stresses and strains of high frequency door usage while ensuring an excellent ease of use. Four return springs ensure that the lever handles always return into a 90° degree position - even after intense usage.

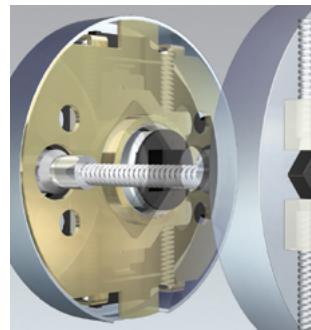

## The advantage of individual selection

OGRO door furniture sets for timber doors are generally supplied with return springs one-sided while narrow-stile door lever handles are provided with two-sided return springs.

## Long support lugs for timber doors

Thanks to the extended support lugs on the thread side of the timber door roses and backplates can larger door thicknesses easily be accommodated.

## Mix and match with the OGRO range

## Security fittings

Series SI 17xx, class of protection ES 1-ZA (DIN 18257) and S2-ZA (EN 1906)

A combination that unifies the security of a DIN-compliant anti-tamper fitting with the high load capacity and flexibility of OGRO project door furniture. The external backplate is simply combined on the inside of the door with the OGRO lever handle and the OGRO rose. And in this combination, the securely bushed internal lever handle ensures durable stability.

## Panic hardware

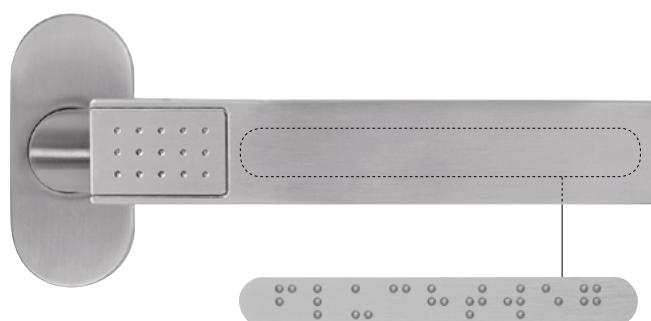

DORMA PHA 2500 system (EN 1125)

The functional reliability and safety of emergency exits and escape routes is assured by the combination of a technically sophisticated OGRO lever handle set and the DORMA Panic Hardware system.

# OGRO WITH BRAILLE

Lever handles with a Braille inscription provide independence and added ease of use for people with impaired vision. OGRO handles used on emergency exits can also be appropriately embossed, thus improving overall safety without in any way affecting the visual attractiveness of the hardware set. The Braille is located on the inside face, precisely where the finger tips make contact

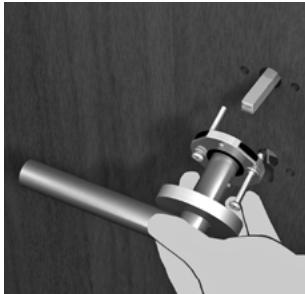

when the handle is gripped. Immediate recognition by Braille readers is therefore assured. DORMA also offers multi-level adaptation of key words in Braille to suit each application. These tactile inscriptions are available in a range of languages for maximum international validity and flexibility.

**Note:** This symbol indicates that the DORMA product is available with Braille.

## CLICK & GO FOR FAST FIXING TO TIMBER DOORS

**Standard lever handle sets**  
No click, go...eventually.

**Disadvantage 1**  
Installation of entire parts.  
Danger of causing scratches  
and / or other damages.

**Disadvantage 2**  
Small space for the use of tools.

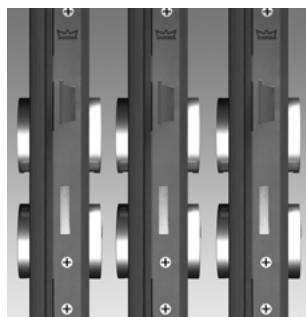

**DORMA advantages – Click & Go fast fixing system**

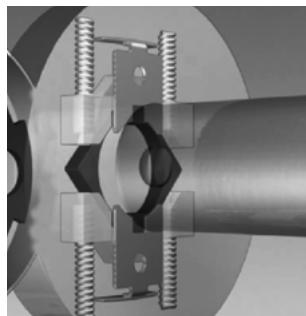

**Advantage 1**  
Fast and easy installation of the  
base parts. Other product parts  
do not hinder assembly.

**Advantage 2**  
Roses and backplates are simply  
clicked on the base parts. No  
risk of damaging other product  
parts.

**Advantage 3**  
Space-saving door transportation.  
Knobs and lever handles are  
clicked into the escutcheons on  
the building site before the final  
inspection. Pollution and damage  
are avoided during the construction  
phase.

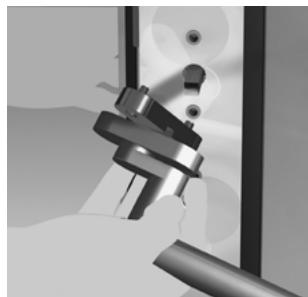

**Advantage 4**  
4 detents allow for fast fixing as  
the lever is snatched into place  
and automatically securely and  
steadily bushed.

**Advantage 5**  
The grub screw does not have  
to be tightened when using lever  
handles (8 mm spindle) for  
timber doors.

# CLICK & GO FOR FAST FIXING TO NARROW-STILE DOORS

**Standard lever handle sets**  
No click, go...eventually.

**Disadvantage 1**  
Installation of entire parts.  
Danger of causing scratches  
and / or other damages.

**Disadvantage 2**  
Small space for the use of tools.

**DORMA advantages – Click & Go fast fixing system**

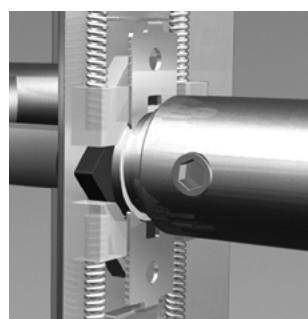

**Advantage 1**  
Fast and easy installation of the  
base parts. Other product parts  
do not hinder assembly.

**Advantage 2**  
Roses and backplates are simply  
clicked on the base parts. No  
risk of damaging other product  
parts.

**Advantage 3**  
Space-saving door transportation.  
Knobs and lever handles are  
clicked into the escutcheons on  
the building site before the final  
inspection. Pollution and damage  
are avoided during the construc-  
tion phase.

**Advantage 4**  
4 detents allow for fast fixing as  
the lever is snatched into place  
and automatically securely and  
steadily bushed.

DIN EN 1906

DIN EN 1906 sets out the requirements and test methods for **lever handles and door knobs**. An eight-digit key classifies the test results relating, for example, to resilience, durability, fire resistance and corrosion resistance. The entire furniture set including the fixing elements and the spindle is evaluated. Assessment criteria such as torque, tensile strength, free play and free angular play

travel are measured before and after a long time functionality test and must attain specified values depending on the relevant structured. The category of use is broken down into four grades, ranging from 1 (lowest) to 4 (highest). As you would expect from DORMA, our

**OGRO door furniture sets fully meet class 4 requirements – the class with the highest performance demands.**

The complete classification code for our OGRO furniture sets is explained below. The OGRO range achieved the maximum score in all relevant test categories, providing you with objective evidence that you will be choosing a high quality product. Naturally, we also apply the same extremely high standards to other criteria that are not assessed in DIN EN 1906, such as innovative design,

quality of finish, range of models and finishes to choose from, and ease of installation. And as demands inevitably rise, you can rely on us to maintain the customarily high quality of service, advice and customer support offered by the DORMA Group.

#### **Classification code to DIN EN 1906 for the DORMA OGRO range**

4	7	-	D1/C1*	0/1**	5	0	A/B/U
<b>Category of use</b> Four classification grades are defined: <b>Grade 1:</b> Medium frequency of use by people with a high incentive to exercise care and with a small chance of misuse, e.g. internal residential doors. <b>Grade 2:</b> Medium frequency of use by people with some incentive to exercise care but where there is some chance of misuse, e.g. internal office doors. <b>Grade 3:</b> High frequency of use by public or others with little incentive to exercise care and with a high chance of misuse, e.g. public office doors. <b>Grade 4: High frequency of use on doors which are subject to frequent violent usage, e.g. football stadiums, offshore installations (oil rigs), barracks, public toilets, etc.</b>							<b>Type of operation</b> <b>A = spring assisted furniture</b> <b>B = spring loaded furniture</b> <b>U = unsprung furniture</b>
<b>Durability</b> Grade 6: medium frequency of use 100,000 cycles <b>Grade 7: high frequency of use</b> <b>200,000 cycles</b>							<b>Security</b> <b>Grade 0: no performance determined***</b> Grade 1: mild burglary resistance Grade 2: moderate burglary resistance Grade 3: high burglary resistance Grade 4: extra high burglary resistance
<b>Door mass</b> No classification							<b>Corrosion resistance</b> 0 = no performance determined 1 = mild resistance 2 = moderate resistance 3 = high resistance 4 = very high resistance <b>5 = extremely high resistance.</b>
<b>Fire resistance</b> <b>Grade 0:</b> no performance determined <b>Grade A:</b> for use on smoke-control doors <b>Grade A1:</b> for use on smoke-control doors, tested with 200 000 cycles on a test door <b>Grade B:</b> for use on smoke-control and fire-resistant doors <b>Grade B1:</b> for use on smoke-control and fire-resistant doors, tested with 200 000 cycles on a test door <b>Grade C:</b> for use on smoke-control and fire-resistant doors with requirements for fire protection inlays in backplate, rose and escutcheon <b>Grade C1:</b> for use on smoke-control and fire-resistant doors with requirements for fire protection inlays in backplate, rose and escutcheon, tested with 200 000 cycles on a test door <b>Grade D:</b> for use on smoke-control and fire-resistant doors with requirements for special core in the handle/knob <b>Grade D1:</b> for use on smoke-control and fire-resistant doors with requirements for special core in the handle/knob, tested with 200 000 cycles on a test door				<b>Safety</b> 0 = for normal use <b>1 = for safety applications</b>			

**OGRO lever handles with 2,000,000 test cycles**

OGRO lever handles in stainless steel have passed the durability test prescribed in DIN EN 1906 to the tune of 2,000,000 operating cycles. This thus far

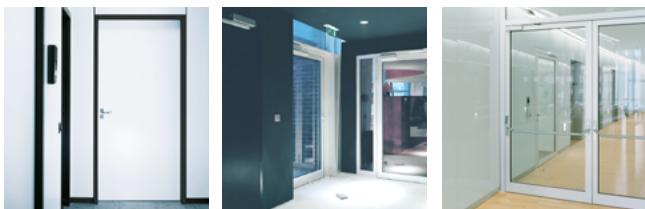

exceeds the endurance limit of 200,000 cycles specified in the standard. The MPA (German Material Testing Authority) certificate No. 120002933.15

is available on request, or can also be downloaded from [www.dorma.de](http://www.dorma.de).  
The post-test results for free play and free angular movement

were, at <1 mm, also well within the limits specified in DIN EN 1906 of <6 mm and <5 mm respectively.

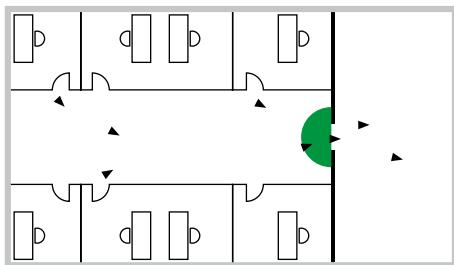

# EN 179

## In buildings not frequented by the public

Users aware of how to open the emergency exit door.

### No danger of panic

**EN 179 – Emergency exit devices operated by a lever handle**

# EN 1634-1

Appendix C of EN 1906 states as follows: For confirmation of suitability for use on fire resistant/smoke control doors, fittings with or without a keyhole may only be fixed to the door that satisfy the corresponding fire resistance criteria according to EN 1634:1.

# DIN 18273

DIN 18273 stipulates that **door furniture sets for fire and smoke control doors** must form a single integrated assembly, and that the manufacturer of the furniture must effectively match the individual components of such assemblies to one another. The manufacturer of the furniture must specify and provide a description of the individual components belonging together. A door furniture set must not be assembled from unspecified

When selecting the right panic hardware, it is important to know the type of building in which it is to be installed. This then indicates which harmonised European standard applies. EN 1125 for public buildings or EN 179 for buildings with no general public usage.

Hence: In the case of hospitals or airports, for example,

EN 1125 applies. This specifies the installation of panic exit devices operated by a horizontal bar. If the building is a home or an office complex, on the other hand, EN 179 applies. Here, the emergency exit devices can be operated by a lever handle or a push pad.

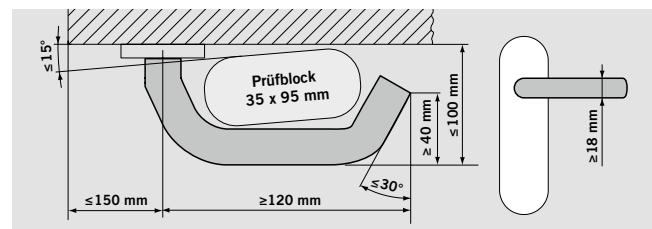

### For timber doors

DO 20.4.01 Door fittings with roses and backplates on timber doors.  
Certification of conformity with EN 179:  
No 0432-EN 179-DO 20.4.

### For narrow-stile doors

DO 20.4.01 Door fittings with roses on narrow-stile doors.  
Certification of conformity with EN 179:  
No 0432-EN 179-DO 20.4.

### Relevant dimensions to EN 179:2008

The gauge block, angle  $\leq 15^\circ$  with respect to the door surface, must pass between the lever handle and the door.

The certified lever handles are marked with an **E**.

components, even if it can be demonstrated that they are individually suitable in accordance with this standard. As a result, even our fittings would lose their fire approval if they were combined with products which have not been defined by us as part of an integrated assembly. DIN 18273 also defines standard specifications, tests and external and internal quality monitoring as well as the ID marking of the sets.

All of our FS (fire resistant to DIN) door furniture sets are approved by MPA NRW on the basis of conformity certification and third party verification agreement No. 125712 aligned to the technical rules of German Building Regulations List A, Part 1: DIN 18273 FS: 1997-12.

The certified lever handles are marked with an **F**.

Knob roses are also available with knob models 3020A, 3548 und 3548V.

**Keyhole profiles:** Key roses 6679 and 6676 are available with the following profiles

We recommend the use of blind rivet nuts (flush with the door surface) for the installation of the roses. If blind rivet nuts with plunged boss (flange) are used, do we offer OGRO shims 6621D (for oval roses) and 6611D (for rectangular roses)

Also available without keyhole (**UN** = unpierced). Other profiles on request.

# OGRO SCREWS AND SPINDLES

The OGRO base parts are equipped with long support lugs in order to handle different door thicknesses with the same fixing

screw length. Identical screw and spindle length intervals simplify material and stock management.

Door lever handles for narrow-stile doors (A- or V-type lever handles) require different spindle lengths.

## Screws and spindles for OGRO lever handles

OGRO 95 Screws for timber doors		OGRO 114 8 mm	OGRO 114 FS 9 mm

# OGRO LASER

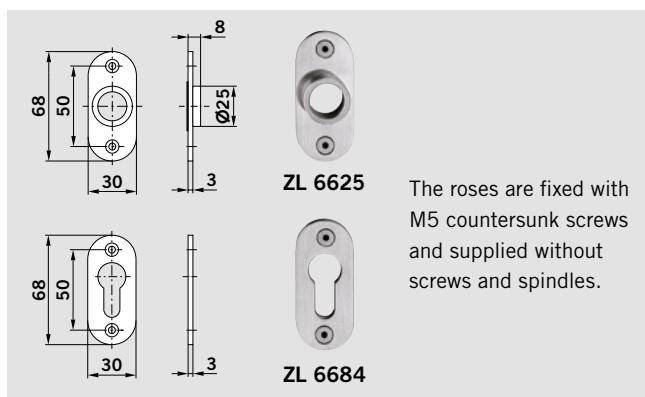

## ZL roses and backplates for timber doors

- The ZL components can be combined with all lever handles shown on pages 10/11 and 24/25.
- The installation on timber doors is done with hexagonal socket screws (M4) included in the scope of supply.
- The ZL roses and escutcheons for narrow-stile doors are supplied without fixings or spindles.
- The ZL components are only supplied without return springs and lever handles respectively fixed dead knob securely bushed.
- The door thickness details for spindles and screws on pages 37-39 do not apply to the ZL system. Please enquire separately.
- Our laser technology allows us to produce an almost unlimited range of individual shapes for roses and back-plates in the ZL system. Simply contact us to discuss your design. All you have to do is comply with a maximum material thickness of 8 mm and the measurements required for the lock (e.g. keyhole profiles, hole centres, ...).

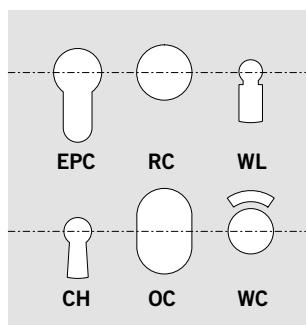

## ZL roses for narrow-stile doors

The roses are fixed with M5 countersunk screws and supplied without screws and spindles.

## Keyhole profiles

Also available without keyhole (UN = unpierced). Other profiles on request.

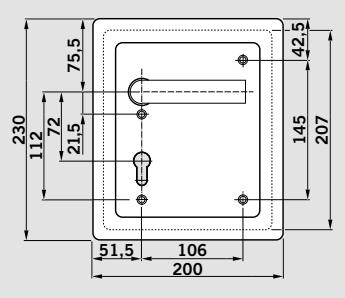

# FITTINGS FOR SPORTS HALL DOORS AND OPERABLE PARTITIONS

Fittings 8937A and 8937B  
are suitable for doors with a thickness  
> 45 mm.

Mounting depth 23 mm.  
Available with 8 mm or 9 mm spindle, EPC.

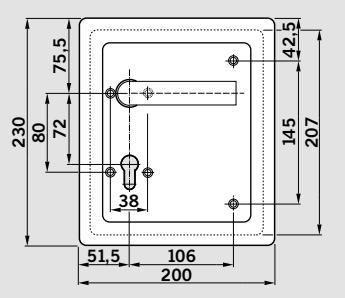

When ordering, please state the handing/  
direction of the lever handle.

**8937A** s/s **F**

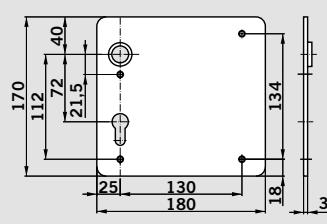

Fitting on the opposite side for short backplate

**8937B** s/s **F**

Fitting on the opposite side for roses

**Broad backplate OGRO 7691** in s/s

## ACCESSORIES

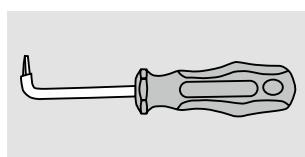

**BL 650** drilling template

The BL 650 drilling template assists in mounting the OGRO round roses, short, long and broad backplates on timber doors. Drills and locating pins for the various spindles and keyhole profiles are stored handy and space-savingly. A side handle supports keeping the template in a stable position to ensure precise drilling.

**OGRO 660 escutcheon lifter**

The OGRO 660 escutcheon lifter supports easy and hassle-free removal of roses and backplates while protecting the door leaf from scratches.

# OGRO SPECIFICATION TEXT

---

## OGRO 8XXX

OGRO project door furniture comply to the DIN EN 1906

Classification key aluminium:

4 | 7 | - | D1 | 0/1\* | 5 | 0 | A/B/U

Classification key stainless steel:

4 | 7 | - | C1 | 0/1\* | 5 | 0 | A/B/U

MPA certified longterm performance test with 2 million cycles. Tested according to DIN EN 1634-1. Environmental Product Declaration (EPD) according to DIN ISO 14025. 10 year warranty. High quality Satino surface. Minimal shadow gap with tiny distance between lever handle and rose. 4 return springs for a horizontal 0° lever handle position, non-handed. Securely bushed, maintenance free sleeve-bearing. The click-and-go installation technology enables for a quick and easy installation. Concealed fixings. Steel base parts with long support lugs to handle with great door thickness ranges. Maintenance free M5 screw connection. Equal 9 mm construction height for roses and backplates for timber and narrow-stile doors as well as window lever handles. Free play and free angular play ≤ 1,0 mm (DIN EN 1906). Dismantling of lever handles is possible. Assembly and disassembly possible with standard tools.

### **Aluminium**

- F1 anodised silver
- F2 champagne
- F3 brass
- F4 bronze
- F5 dark bronze
- alike stainless steel

### **Stainless steel**

- satin
- mirror polished
- PVD coated

### **Versions**

- approved for fire and smoke control doors according to EN 1634-1 and DIN 18273
- approved for emergency exit devices according to EN 179

### **Type of lever handle set**

- standard lever handle set (lever/lever)
- apartment door set (lever/knob)
- WC set

### **Escutcheons**

- round roses
- short backplates
- long backplates
- broad backplates
- oval roses for narrow-stile doors

\* when using a grub screw for the tight connection of the lever handles via spindle.
